

Engineering Challenge: Erosion

Step into the shoes of an Engineer: DESIGN, and BUILD a MODEL shelter for hikers in the Adirondacks.

Make sure to **DRAW** and **LABEL** your building design below.
Try to incorporate the location of your model in the drawing as well

Now you're ready to test!

Pour some water on your building and observe what happens.

After the Experiment:

How did your building change after the rain storm?

Is it what you expected to happen?

What would you change for a future building? Are there any new materials you would like to try?
