

# NATURE FROM YOUR WINDOW:

**THE ACTIVITY:** Find a window in your home and look outside.

Try to answer the following questions:

- What scene do you see?
- Are there trees, or animals?
- If there are animals, what are they and what are they doing?
- What's the weather like?

Pick a time to make observations at this window everyday this week. Keep a log of the changes that you observe, animal behaviors you notice, and the differences in weather from day-to-day. Remember, nature is all around us; we can find some extraordinary things if we look at it closely!

**Scientists use many senses to observe the world. Challenge your senses!**

- If you're able, open the window:
  - How does the air feel against your skin? Is it warm or cold?
  - Look at the sky--what clouds do you see? How would you describe them?
  - Is it windy?
- What sounds do you hear? Can you identify what is making them?
- Do you notice any smells? How would you describe them?

**Use the following pages to help guide your observations for the week.**
